Previously Lecturer at [University College London](#)
Postdoc at [IMDEA Software Institute](#)
Software Engineer at [JetBrains](#)

Anxiety

Why do a PhD?

Why do a PhD?

Challenge

Not this kind of Challenge...

SECTION A (80 Marks)

[10×3]

Question 1

- (i) Find the matrix X for which:

$$\begin{bmatrix} 5 & 4 \\ 1 & 1 \end{bmatrix} X = \begin{bmatrix} 1 & -2 \\ 1 & 3 \end{bmatrix}$$

- (ii) Solve for x , if:

$$\tan(\cos^{-1}x) = \frac{2}{\sqrt{5}}$$

- (iii) Prove that the line $2x - 3y = 9$ touches the conics $y^2 = -8x$. Also, find the point of contact.

- (iv) Using L'Hospital's Rule, evaluate:

$$\lim_{x \rightarrow 0} \left(\frac{1}{x^2} - \frac{\cot x}{x} \right)$$

- (v) Evaluate: $\int \tan^3 x \, dx$

- (vi) Using properties of definite integrals, evaluate:

$$\int_0^{\pi/2} \frac{\sin x - \cos x}{1 + \sin x \cos x} \, dx$$

- (vii) The two lines of regressions are $x + 2y - 5 = 0$ and $2x + 3y - 8 = 0$ and the variance of x is 12. Find the variance of y and the coefficient of correlation.

- (viii) Express $\frac{2+i}{(1+i)(1-2i)}$ in the form of $a + ib$. Find its modulus and argument.

More like this kind of Challenge

?

Millennium Problems

Yang–Mills and Mass Gap

Experiment and computer simulations suggest the existence of a "mass gap" in the solution to the quantum versions of the Yang-Mills equations. But no proof of this property is known.

?

Riemann Hypothesis

The prime number theorem determines the average distribution of the primes. The Riemann hypothesis tells us about the deviation from the average. Formulated in Riemann's 1859 paper, it asserts that all the 'non-obvious' zeros of the zeta function are complex numbers with real part $1/2$.

?

P vs NP Problem

If it is easy to check that a solution to a problem is correct, is it also easy to solve the problem? This is the essence of the P vs NP question. Typical of the NP problems is that of the Hamiltonian Path Problem: given N cities to visit, how can one do this without visiting a city twice? If you give me a solution, I can easily check that it is correct. But I cannot so easily find a solution.

?

Navier–Stokes Equation

This is the equation which governs the flow of fluids such as water and air. However, there is no proof for the most basic questions one can ask: do solutions exist, and are they unique? Why ask for a proof? Because a proof gives not only certitude, but also understanding.

?

Hodge Conjecture

The answer to this conjecture determines how much of the topology of the solution set of a system of algebraic equations can be defined in terms of further algebraic equations. The Hodge conjecture is known in certain special cases, e.g., when the solution set has dimension less than four. But in dimension four it is unknown.
